Product description

The system includes a continuous light line made of polycarbonate tubes with internal and external aluminium component housing.

A parallel placed LED strip emits light into an impact-proof polycarbonate tube. With special reflector techniques the light is beamed at a specific angle to create an optimal light distribution for the application.

The specific light distribution (Wide, basic, narrow) makes it possible to illuminate spaces in different ways. This means the fixture is suited for tunnel, underpasses, pedestrian tunnels, bicycle tunnels, metro and train tunnels or similar applications.
